Icon.

**Icon is New Zealand's first
fully integrated range of
stainless steel hardware for
aluminium windows and
doors.**

The family likeness is
unmistakable— square-edge,
rectilinear forms with
attractive aesthetics across
the range of window and
door hardware.

Icon is made from 316-grade
stainless steel which offers
increased weathering
performance.

The Icon Range

Icon Lever Door Handle

A clean, compact lever handle with 4-point locking as standard. The grip has a gently radiused front face and a curved back for comfortable hand hold. A lifting movement of the handle activates locking rods at the top and bottom of the door.

The lock comes in two sizes: With the larger size available for doors from APL Architectural Series or Metro Series.

Icon Bi-Fold Handle

The Icon Bi-Fold Operator throws locking stainless steel bolts into the frame at the top and bottom of the door or window panel. The swivel lock activates locking rods in the top and bottom of the bi-fold door or window panel.

The square corners of the handle are combined with radiused top and bottom surfaces to soften the aesthetics. Optional key-locking (separately installed) is available.

Icon Flush Pull

The Icon Flush Pull is ideal for sliding panels where a robust hand grip is not required, providing an alternate to a sliding door handle that offers a more understated look.

Internal corners of the pull are rounded to soften the aesthetics. A mortice lock with hook bolt is fixed separately and is activated by key or interior turn knob in a rectangular base.

Icon Architectural Window Fastener

The Icon Architectural Window Fastener is suitable for APL Architectural Series. A separate colour matching wedge is fitted to the frame or transom.

Icon Escutcheon

The Icon escutcheon provides a separate lock for use with the Icon pull handle. Available in turn snib or key options.

Icon Window Fastener

The Icon Window Fastener is designed for Residential Series awning and casement windows; closing against the window frame with no visible flap or wedge. It blends square-edged and radiused aesthetics. Available in a low profile option.

Icon Pull Handle

This powerful, square-form handle offers a firm, comfortable grip and is ideal for larger sliding panels. It is fixed to the door on both the interior and exterior with a mortice lock with hook bolt fixed separately and is activated by key or interior turn knob in a rectangular base plate.

A larger version is available for sliding doors from APL Architectural Series. Apex or Windsor turn sets are compatible with this handle.
