

Miro.

The Miro Series of door and window hardware is a blend of contemporary classic design and function— characterised by elegant, ergonomic curves.

It offers a unified look from window to door, including internal timber doors. The smooth, ergonomic Miro shapes offer good aesthetics as well as comfortable grip. Secure and convenient locking features have been included.

Miro hardware items are made from die-cast zinc and are usually powdercoated. Plating in a matte silver or gold is also available.

The Miro Range

Miro Lever Door Handle

With a sleek, comfortable grip, common to all things Miro hardware, the lever door lock is available in several locking options, including keyed both sides or with interior snib. An upward handle activates four-point locking.

Miro Pull Handle

The Miro sliding door handle comes in two sizes: The smaller handle is suited to Residential Series sliding doors; and the large handle is suited to use on entrance doors, as well as Metro Series and APL Architectural Series sliding doors.

The lock is separate from the handle and is operated by key or snib. A surface-mounted lock is also available where the handle and lock are combined and fitted to the face of the door site. Apex or Windsor turn sets are compatible with this pull handle.

Miro Surface Mount Sliding Handle

An all-in-one handle and lock for sliding doors or windows. The Miro surface mount sliding handle has a snib or keyway installed into the body of the handle.

Miro Architectural Window Fastener

A separate colour matching wedge is fitted into the frame or transom, making the fastener suitable for a range of high specification window systems – including APL Architectural Series.

Miro Escutcheon

The Miro escutcheon has a separate lock for use with pull handles. Available in turn snib or key options.

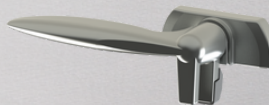

Miro Window Fastener

The Miro Window Fastener combines a sure hand grip with clean lines. Available in a low profile option.

Miro Bi-Fold Operator

The swivel lock activates locking rods in the top and bottom of the bi-fold door or window panel. A key-locking version is also available.

Miro Venting Window Fastener

The venting option of the Miro venting fastener allows the window to be fastened in a partially open position for passive ventilation.
